IMPROVEMENTS

- Instance admins on Teams plans and above can now turn on ALTCHA or Google reCAPTCHA spam protection for all unprotected forms and workflows in one bulk action, instead of enabling it on each form's Processing page or each workflow's Form step individually.
- Removed the outdated "Enable SSL" and "Enable Captcha" checkboxes from the admin Edit Form Properties page. All forms are always served over SSL, and spam protection is managed with the ALTCHA / Google reCAPTCHA settings further down the page.

BUG FIXES

- Fixed an issue where responses from CyberSource recurring payments (subscriptions) using REST API keys did not store the real CyberSource subscription ID and customer token. Both values are now saved on the response, so recurring payments can be matched to their responses.

SECURITY UPDATES

- Fixed an issue where reprocessing or resending a response could include a direct download link for a file uploaded in a field marked Sensitive. Sensitive file uploads are now kept out of these links, as they already are on the original submission.
