Overview

IP Anonymization is an optional privacy setting that automatically anonymizes IP addresses collected with form submissions.

Requirements

- IP Anonymization is available on Team plans and up
- An administrator must enable IP Anonymization before use is available

---

Definition

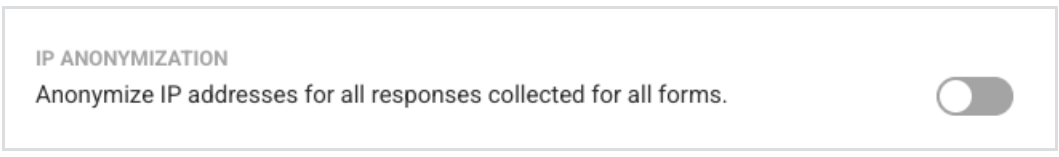

When this feature is enabled, the **last octet of IPv4 addresses and the last 80 bits of IPv6 addresses are replaced with zeros**. This guarantees that the IP address cannot be used to uniquely identify the computer that submitted a response to a form.

Note that the collection of other Personally Identifiable Information (PII) is under the responsibility of the form creator. Such information, if requested through the form, is not anonymized.

How to Enable IP Anonymization

Follow these steps to enable this feature.

1. Go to the **Admin Dashboard** and navigate to the **Security** page. From here, you can view the **IP Anonymization** setting.

2. Set IP Anonymization to **ON.**
3. Click **Save** at the top of the page.
