Overview

[AWeber](#) is an email marketing software that lets you manage email lists and send newsletters. With FormAssembly's AWeber integration, you can have people sign up directly for your AWeber list through a FormAssembly web form. It is great if you need complex forms or want to do more with your data (like exporting it to Excel or a third-party service).

Requirements

To set up the AWeber integration, you'll need

- an [AWeber](#) account
 - FormAssembly [HTTPS Connector](#)
 - FormAssembly Essentials plan and higher, or some legacy plans
-

AWeber Configuration

REMOTE SCRIPT

REMOTE SCRIPT URL:
 A

HTTP REQUEST METHOD:
 POST (default) ▼

Use HTTP Authentication

FIELD MAPPING

Your form fields:

	will be submitted as... (field name)
Email	email
Name	name
Cookie	custom Cookie

B

Additional values	will be submitted as... (field name)	
Newsletter Signup	listname	
custom form	meta_adtracking	Remove
1	meta_message	Remove

C

[A]

In the **Remote script URL** box, enter:

`https://www.aweber.com/scripts/addlead.pl`

[B]

You want the fields to match up. Note that `email` and `name` are lowercase, and `custom Cookie` is lowercase and then capitalized. For example, you could have `custom Taxi` or `custom Color` instead.

[C]

Set these additional fields:

listname	The name of the AWeber list to which the form will add subscribers
-----------------	--

meta_adtracking	The ad tracking value you'd like assigned to subscribers who use this form (Optional)
meta_message	The follow-up message subscribers will receive when they sign up. In almost all cases, this is set to 1

Now click **Apply**. That's it! Submissions will now be automatically passed on to AWeber as new subscribers.

You can also [use our ready-made template](#), just make sure to customize the HTTPS Connector with your settings.
