Add Fields and Sections

At the top left of the [Form Builder](#), you'll find a blue **Add Content** button.

From here, you can add a variety of elements, such as questions, fields, and sections.

Overview of Field Types

In the Form Builder, a question is represented by a **label**, which states the question and describes the requested information, and an **input** (also called a **field**), which provides space for the answer.

Questions are organized into 9 different types, based on the input field:

<input type="checkbox"/> Text Input	<input type="text"/> Text Area	<input type="file"/> File Upload
<input checked="" type="checkbox"/> Checkboxes	<input type="radio"/> Radio Buttons	<input type="password"/> Hidden Field
<input type="checkbox"/> Drop-Down Menu	<input type="checkbox"/> Multi-Select List	<input type="password"/> Password

Field Type	Description	Screenshot
------------	-------------	------------

Field Type	Description	Screenshot
Text Input	A text input allows a single line of text. Best used for questions that have a simple answer, like <i>First Name</i> .	 A screenshot of a 'Text Input' field. It consists of a single-line text box with a placeholder text 'Text Input' and a small icon on the right side.
Text Area	A text area allows several lines of text. Best for questions requiring longer answers, like an essay. You can define a character limit for the field with the validation rules.	 A screenshot of a 'Text Area' field. It consists of a multi-line text box with a placeholder text 'Text Area'.
Checkboxes	Checkboxes show a list of choices. Multiple answers can be selected.	 A screenshot of a 'Checkboxes' field. It shows a list of three choices: 'Choice A', 'Choice B', and 'Choice C', each preceded by an unchecked checkbox.
Radio Buttons	Radio buttons show a list of multiple choices. Only one answer can be selected. Radio buttons get their name from old car radios, where you could push a button to select a station, and the previous selection would pop out.	 A screenshot of a 'Radio Button' field. It shows a list of three choices: 'Choice A', 'Choice B', and 'Choice C', each preceded by an unselected radio button.
Drop-Down Menu	Like the radio button, the drop-down menu lists a number of choices. Only one answer can be selected. This input type is preferable when you have a long list of choices. Note: If your menu has more than 500 choices, we recommend using the Autosuggest feature or our Menu Dependencies feature .	 A screenshot of a 'Drop Down Menu' field. It shows a dropdown menu with a pink header 'Please select...' and three options: 'Choice A', 'Choice B', and 'Choice C'.
Selection List	Like checkboxes, a selection list displays a list of choices and allows multiple answers. Note that checkboxes are usually simpler and easier to use for respondents. To select multiple choices, respondents will need to click and hold the CTRL (Windows) or Command (Mac) key while making selections.	 A screenshot of a 'Multi-Select List' field. It shows a list of four choices: 'Please select...', 'Choice A', 'Choice B', and 'Choice C'. A small 'Multi-Select List' label is visible next to 'Choice B'.

Field Type	Description	Screenshot
File Upload	<p>A file upload allows respondents to select a file on their computer and attach it to the form. A maximum of 20 file upload fields may be added to a form.</p> <p>Note: There is a 30MB limit for the total size of uploaded files to a form, by default. For Essentials plan users and higher, this may be increased to a max of 35MB by request to FormAssembly Support.</p>	
Password	<p>The password input allows a single line of text. The entry is masked.</p>	
Hidden Field	<p>This type of input is not visible in the form, and respondents cannot enter data into it. Useful for storing tracking data that doesn't need to be edited.</p>	

Overview of Section Types

Sections are containers that contain questions, or other sections. Sections provide a way to organize your form and apply a particular layout or behavior to a group of questions.

For instance, you can create a section to arrange questions across [multiple columns](#).

Section Type	Description
Group	A group is an invisible way to organize multiple elements in a form.

Section Type	Description
Fieldset	A fieldset visually groups related questions together, such as contact information. The fieldset has a border, and its title (called a legend) is characteristically displayed across the top border.
Page	<p>You can add multiple pages to a form for a more user-friendly and organized layout.</p> <p>Note: It's easiest to create the page first, then the fields within the page, but you can also drag and drop fields into other pages.</p>
