For all Fields

In the **Layout** settings of the Form Properties menu, you may select the form's settings for the placement of the [hints](#) and [labels](#). You can also enable the [Navigation Bar](#) on [multi-page forms](#).

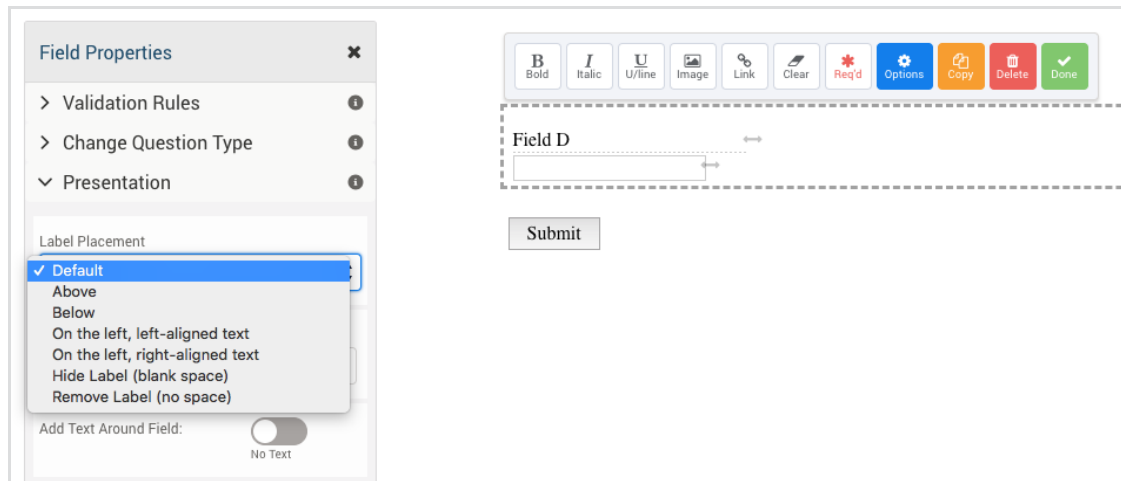

The image shows a screenshot of the 'Form Properties' dialog box. The 'Layout' section is expanded, showing the following settings:

- Width:** A text input field with a placeholder 'E.g: 700px, or 100%'.
- Default Label Position:** A dropdown menu set to 'Above'.
- Default Hint Position:** A dropdown menu set to 'Pop-up'.
- Multi-Page Navigation Bar:** A toggle switch that is currently turned off, labeled 'Disabled'.

Position Individual Field Labels

To change the position of the label of an individual question:

1. Select your question and click the **Options** button to open the [editing sidebar](#).
2. Select **Presentation** from the sidebar.
3. Select your label placement preference from the **Label Placement** drop-down menu.

Hiding vs. Removing the Label

Tip: Do not delete labels. Instead, give them a name before hiding or removing them. This will make them easier to reference in the outline view and in your connectors.

Removing a label will hide the space saved for the label.

Hiding a label will hide the label text, but the space where the text would show will still be there.
