## Related Articles

You can use FormAssembly's HTTPS connector to integrate with [GoToWebinar](#). This can be useful if you would like to use your own forms for webinar registrations, or if you want to use our other connectors to process payments or send data to Salesforce in addition to registering customers.

**Note:** The HTTPS Connector is available on all FormAssembly plans.

Additionally, the GoToWebinar API does not support custom fields, therefore this integration **does not work with custom GoToWebinar fields**, only standard fields.

---

## Configuring the Connector

To begin, select the form you'll be working with, go to the **Connectors** page, select the HTTPS Connector in the **Form Submitted** portion of the timeline, and click on **Configure**.

At the top of the connector, under **Remote Script** you'll need to enter this for the Remote Script URL: `https://attendee.gotowebinar.com/registration.tmp` and make sure the request method is set to **POST**

**REMOTE SCRIPT**

REMOTE SCRIPT URL:

HTTP REQUEST METHOD:

Use HTTP Authentication

## Field Mapping

Field Mapping is how the connector knows what fields in your form are going to be sent to the specific fields in your webinar registration form.

To begin, find the field in your FormAssembly form where the user will be selecting the webinar they wish to attend. In the example below, this is called "Class Selection." For that field, you will need to give it a value of "webinar"

Next, click on **Show Choice Mapping** so you can see the selections available. Here, you will need to assign the GoToWebinar ID for each individual webinar, as shown below:

**FIELD MAPPING**

Your form fields:	will be submitted as... (field name)
Available Dates	<input type="text" value="webinar"/>
<a href="#">▼ Show choice mapping</a>	
June 12th: The (Enterprise) Prefill and Update Salesforce loop	<input type="text" value="1114686346529382913"/>
June 19th: MailChimp Newsletter Signup	<input type="text" value="4814116363484364289"/>
(July 10th) Salesforce: Making a Connection	<input type="text" value="766108175747254529"/>

If you do not know how to find your GoToWebinar ID, this is located at the end of the URL for each webinar:

Finally, you'll need to map the following values to the fields you would like to send to the registration form. Please note that First Name, Last Name, and Email Address are the only fields that are required by GoToWebinar.

First Name	<input type="text" value="registrant.givenName"/>
Last Name	<input type="text" value="registrant.surname"/>
Email	<input type="text" value="registrant.email"/>
Company	<input type="text" value="registrant.organization"/>
Please name something you'd like to learn from this class.	<input type="text"/>
How did you learn about our classes?	<input type="text"/>
Questions or comments?	<input type="text" value="registrant.comments"/>

Once you have everything mapped, you're ready to click **Apply** and start testing things out!
