Overview

When publishing your form to WordPress, you may occasionally see the following error:

```
Warning: curl_setopt() [function.curl-setopt]:CURLOPT_FOLLOWLOCATION cannot be activated when safe_mode is enabled or an open_basedir is set in ...plugins/wp_formassembly1/wp_formassembly.php on line 91"
```

Resolution

This problem is caused when older WordPress sites have PHP's `safe_mode` enabled. This prevents the FormAssembly plugin from getting your form from FormAssembly.

This PHP setting is now deprecated, and you should do one of the following:

1. Disable `Safe_mode` on your server.
(You may need to contact the server admin or your host provider to do this.)
2. Upgrade to a version of WordPress that uses PHP 5.4
(This setting does not exist in PHP 5.4 and later.)

You can find more information [about this issue from WordPress](#), and more information about PHP safe mode [here](#).
