Managing Datasets

The **Dataset List** makes it easy to manage datasets you've imported to use with our [Autosuggest feature](#). Datasets are useful when you want users to be able to choose from lists of options to long for a dropdown menu. To access this tab, **click Dataset List** in the sidebar of the Forms List page.

Note: the [Autosuggest feature](#) has been released to all Premier and Enterprise users who are using Form Builder 4.4.0 and above. Datasets currently have a size limit of 2MB.

If you are an enterprise user, you will need to make sure the **Can Use Datasets** permission is checked under User Roles in the Admin Dashboard for any user wishing to use this feature.

Active Datasets

Datasets that you've imported and are currently using will be shown in the **Active Datasets** section. This view contains information about the source of the dataset, the name, the language, the date it was created, the date it was last modified, and its visibility.

Active Datasets

Your currently active Datasets. They will be selectable when configuring an Autosuggest field.

DATA SOURCE	NAME	LANGUAGE	CREATED	MODIFIED	VISIBILITY		
csv	Salesforce Accounts Li...p.csv	English (US)	06/18/2018 04:52:35 PM	06/18/2018 04:52:35 PM	Private	Make Public	Deactivate
csv	Course Costs - Sheet1.csv	English (US)	05/03/2019 01:35:46 PM	05/03/2019 01:35:46 PM	Private	Make Public	Deactivate
csv	Example Spreadsheet - ...9.csv	Français	06/19/2019 04:47:48 PM	09/09/2020 04:03:25 PM	Private	Make Public	Deactivate

Click on a dataset's filename to access additional information about a dataset.

Click **Make Public** in order to make a dataset available to all users on your instance (*Enterprise users only*). By default, datasets will be set as Private, which means they can only be accessed by the user who imported them.

Click **Deactivate** to deactivate a given data set. This will remove the dataset from the list of existing datasets you have access to from within the Form Builder. It can be useful to deactivate a dataset if you don't plan to use it frequently or if you're using a large number of datasets. Deactivating a dataset will move it to the **Inactive Datasets** section, but it will not be deleted.

Inactive Datasets

Datasets you're not currently using are shown in the **Inactive Datasets** section. Like the **Active Datasets** section, this list contains information about the language of a dataset, the date it was created, the date it was last modified, and its visibility.

Inactive Datasets

Your inactive Datasets. They are not selectable when configuring an Autosuggest field, but still work in forms they are already configured in. They may be reactivated for use, or deleted permanently.

FILENAME	LANGUAGE	CREATED	MODIFIED	VISIBILITY		
Form-Datas...d.csv	English (US)	07/10/2018 07:32:49 PM	09/09/2020 04:00:44 PM	Private	Reactivate	Delete

Click **Reactivate** to reactivate a data set. This will make the dataset accessible from your list of existing datasets in the Form Builder.

Click **Delete** to permanently delete a dataset from your account. **You should only delete a dataset if you're sure you won't need to use it again.**

Accessing Datasets

Datasets

You don't have permissions to view Datasets

Datasets are reusable tables of information for configuring multiple choice questions on your forms.

[Learn more about accessing Datasets.](#)

If you are encountering a message that states that you do not have access to Datasets, you may have one of two issues.

1. You are an APP customer on our Professional plan and do not have access to the feature at this level.
2. You are an Enterprise or Compliance Cloud customer and do not have the correct [permissions](#) turned on to use this feature.
