Managing Datasets

The **Dataset List** makes it easy to manage datasets you've imported to use with our Autosuggest feature. Datasets are useful when you want users to be able to choose from lists of options too long for a dropdown menu. To access this tab, select **Dataset List** from the sidebar of the Forms List page.

> **Note**: Datasets have a size limit of 2MB.

Requirements

To use Datasets, a FormAssembly user must:

- be part of an Essentials plan or higher
- have the **Can Use Datasets** user permission enabled for their login
- use Form Builder version 4.4.0 or newer

Active Datasets

Datasets that you've imported and are currently using will be shown in the **Active Datasets** section. This view contains information about the source of the dataset, the name, the language, the date it was created, the date it was last modified, and its visibility.

Click on a dataset's filename to access additional information about a dataset.

Click **Make Public** to make a dataset available to all users on your instance. By default, datasets will be set as Private, which means they can only be accessed by the user who imported them.

Click **Deactivate** to deactivate a given data set. This will remove the dataset from the existing datasets list you can access from within the Form Builder. Deactivating a dataset can be helpful, if you don't plan to use it frequently or when using many datasets to manage the length of the existing datasets list. Deactivating a dataset does **not** delete it, instead, it will move to the **Inactive Datasets** section.

Inactive Datasets

Datasets you're not currently using are shown in the **Inactive Datasets** section. Like the **Active Datasets** section, this list contains information about the language of a dataset, the date it was created, the date it was last modified, and its visibility.

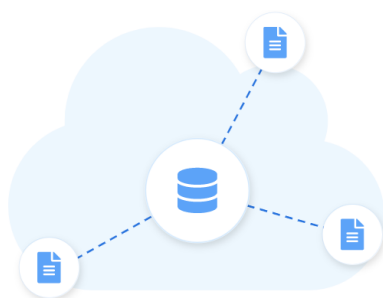

Click **Reactivate** to reactivate a data set. This will make the dataset accessible from your existing datasets list in the Form Builder.

Click **Delete** to permanently delete a dataset from your account. **You should only delete a**

dataset if you're sure you won't need to use it again.

Accessing Datasets

Datasets

You don't have permissions to view Datasets

Datasets are reusable tables of information for configuring multiple choice questions on your forms.

Learn more about accessing Datasets.

If you are encountering a message that states that you do not have access to Datasets, you may have one of two issues.

1. You are a customer on our Professional or Basic plan and do not have access to the feature.

2. You are an Essentials or above customer and do not have the correct permissions enabled to use this feature.
