Using the Formula Editor

Within our payment connectors, you can use the [FormAssembly Formula Editor](#) to add complicated logic and field aliases to your mappings.

Anywhere you might need a formula inside the connector, the Formula Editor "f" will pop up. Just click on it to launch the Editor!

This can be useful if you are wanting the quantity, price, description, name, or subscription information to be defined by a combination of choices from your form, or by a specific formula or value.

There are a few payment connectors where this functionality is not available, so if you do not see the Formula Editor "f" then you will not be able to use the Formula Editor in that particular connector.

The screenshot shows a configuration form for an 'ITEM'. It contains four main fields, each with a dropdown menu and a small 'f' icon in a red box indicating the formula editor:

- ITEM NAME ***: Contains the text 'My Item for Sales'. The 'f' icon is located at the end of the input field.
- DESCRIPTION**: Contains the text 'do not use'. The 'f' icon is located at the end of the dropdown menu.
- UNIT PRICE ***: Contains the text 'defined here:'. The 'f' icon is located at the end of the dropdown menu.
- QUANTITY ORDERED ***: Contains the text 'defined here:'. The 'f' icon is located at the end of the dropdown menu.

Below these fields, there are two rows of input fields:

- The first row has an input field containing '1.00' with an 'f' icon at the end.
- The second row has an input field containing '1' with an 'f' icon at the end.
