Use the FormAssembly Lightning Component in Salesforce Experience Cloud

Download the PDF of this article.

In this Article Related Articles Before Setup

The following steps will walk you through using FormAssembly's Lightning Component to publish a form within your Salesforce Experience Cloud Site (formerly Salesforce Communities).

Before starting these steps, please ensure you have installed FormAssembly for AppExchange. Follow the steps outlined here to install and set up the application.

Things to Note:

- You do **not** need to use Salesforce Experience Cloud Authentication (available for Team plan customers and up) to use our Lightning component and embed a form on your Experience Cloud Site. This is an option if you would like to restrict your forms to your Experience Cloud Users only, and it is **not required**.
- If you are a Team plan user and have the Salesforce Add-on, you may use the Salesforce Prefill Connector with Salesforce Experience Cloud Authentication enabled to prefill Experience Cloud User information.
- You do **not** need to set up Single Sign-On (SSO) between Salesforce and FormAssembly to use the FormAssembly Lightning Component.
- The Lightning Component can be installed in a sandbox by using this link.
- Support for Experience Cloud varies across device types and browsers. Please refer to Salesforce for information about their browser support requirements for communities.

Configuration Steps

1. Go to **Setup** \rightarrow **Feature Settings** \rightarrow **Digital Experiences** \rightarrow **All Sites** and click **Builder** for the Experience Cloud Site where you plan to publish your form.

2. Go to the **Experience Cloud Builder**, find the page where you want to publish the form, and select **Components.**

3. Next, select **FormAssembly Form** under **Custom Components.** If you do not see this option, ensure you have installed FormAssembly from the AppExchange and have updated it to at least version 2.34.

Note: The FormAssembly component is only available on pages using the Aura framework. The component does not support Lightning Web Runtime or any other framework, at this time.

4. Drag the form to the place on your page where you would like it. Then, **open a new tab or browser window** and log in to your FormAssembly account.

5. Within FormAssembly, find the form you would like to publish and copy the Form ID of the form you would like to publish.

6. Return to the Experience Cloud Builder and paste the Form ID into the Lightning Component dialog box.

- If you are **not** using the Salesforce Experience Cloud Authentication, you do not need to complete the remaining steps. Add the Form ID (found on the Publishing page in FormAssembly) to the component dialog box to complete the configuration.
- If you are using Salesforce Experience Cloud Authentication, please continue with the subsequent steps.

7. Return to your FormAssembly account, find the form you would like to publish, and go to **Configure** \rightarrow **Processing**.

8. Under Allow Responses From select Salesforce Experience Cloud User.

Any changes made in the processing section will be reflected everywhere the form is published, including Workflows. FORM AVAILABILITY: STATUS: Active Active Archived (no processing) ALLOW RESPONSES FROM	Processing Options	
FORM AVAILABILITY: STATUS: Active Active Archived (no processing) ALLOW RESPONSES FROM	Any changes made in the processing section will Workflows.	be reflected everywhere the form is published, including

Archived (no processing) ALLOW RESPONSES FROM	Active	
ALLOW RESPONSES FROM	O Archived (no processing)	
	ALLOW RESPONSES FROM	
Salesforce Experience Cloud User 🗸	Salesforce Experience Cloud User	~
	Configure	

9. Click **Configure** and enter your Portal Login URL and Salesforce Org ID. Additional information and details on this process can be found on our Salesforce Experience Cloud Authentication page.

10. Scroll down to **Step 2. FormAssembly Lightning Component.** Copy and paste the values for **Form ID** and **Secret Token** to the Lightning Component dialog box on your Experience Cloud Builder.

Please refer to the documentation to ins or above). Then use the following inform	tall the latest FormAssembly for AppExchange package (v2.6
a Community page.	
FORM ID:	
4642405	

Note: If you are **not** using the Salesforce Experience Cloud Authentication, you will not need to paste in the form token; that can be left blank.

12. Press **Enter** on your keyboard to save the configuration, and **Publish** the changes to your Experience Cloud Site. You should now be able to see the form when logged in to your Experience Cloud Site.

Add FormAssembly Apex Class Permissions for Experience Cloud Users

To ensure the function of forms embedded using the FormAssembly Lightning Component for Salesforce Experience Cloud Sites, you will need to assign specific Apex Classes to Guest and Experience Cloud Users.

You may follow the steps in either of the two options: Option 1: Using Enhanced Profile Views to Modify User Profiles

Note: You will need to enable the Enhanced Profile User Interface and the Enhanced Profile List Views permissions under Setup \rightarrow Users \rightarrow User Management Settings to use this method.

- 1. Navigate to Setup → Users → Profiles
- 2. Select your Experience Cloud User Profile
- 3. At the top of the profile select the **Enabled Apex Class Access** option, this will redirect you to the **Enabled Apex Class Access** section where you can see the Apex Classes this profile has access to.
- 4. Select Edit
- 5. Select all Available Apex Classes containing the "tfa." prefix namespace and add them to the Enabled Apex Classes
 - Note: Apex Classes are case-sensitive and the lowercase "tfa." classes may appear near the bottom of the list.
- 6. Click Save

Option 2: Adding User Permission Set

- 1. Navigate to **Setup → Users → Permission Sets**
- 2. Create a new permission set to apply to users who need access to FormAssembly forms embedded in Salesforce Experience Cloud Sites.
- 3. Select the newly created permission set.
- 4. Under the Apps section, select Apex Class Access
- 5. Click Edit
- 6. Select all Available Apex Classes containing the "tfa." prefix namespace and add them to the Enabled Apex Classes
 - Note: Apex Classes are case-sensitive and the lowercase "tfa." classes may appear near the bottom of the list.

- 7. Click Save
- 8. Click Manage Assignments to apply the permission set to any users that need access.

Troubleshooting

After you publish your form, if you see "Please wait" or "Form will be displayed here" on your live Experience Cloud Site where the form should be, there are a few settings you will need to check to attempt to resolve this error.

Method 1

For FormAssembly App version 2.4 or Lower:

You will need to complete the new package setup process introduced in version 2.15 up to the current version. Documentation on how to install FormAssembly for AppExchange is here.

For FormAssembly App version 2.34 (current version):

1. Go to **Salesforce > Setup > Installed Packages > Configure** (for FormAssembly) under FormAssembly Setup Information. This will take you to the following screen:

FormAssembly for Salesforce Setup								
$\langle \cdot \rangle$	~ >	~ >	~	> ~	Complete			
	You are now ready to use FormAssembly for Salesforce! Check out the Getting Started tab for more info. Complete & Open FormAssembly							

2. To confirm what the instance URL is, scroll down and go to "**previous**", "**edit details**", and "**previous**" to reach the page below:

FormAssembly for	r Salesforce	e Setup								
 ✓ 	> ~		Clarify Details		~	\rangle	~	\rangle	 	
Clarify Details										
Let's find your account. Which plan are you currently subscribed to? Professional Premier Enterprise Cloud Compliance Cloud To access your plan information, first log in to your FormAssembly account. Next, click the dropdown next to your username in the top right to view your plan under the Account and Billing section.										
Instance Details We need to map your FormAssembly instance. What is the url for your FormAssembly login page?										
app-test.tfaforms.net This is the url that you use to login to FormAssembly (e.g.: https://www.companyname.tfaforms.net). It is also listed in your "Welcome aboard!" email from us.										
									Previous	Next

3. Ensure the instance URL does **not** include "https://" here.

4. Once you've confirmed the installed package URL is correct, navigate to Setup > Custom
 Settings > Manage > Edit, and ensure the instance URL matches the installed package
 URL (and does not include "https://"):

FormAssembly Configuration Edit							
Provide values for the fields you created. This data is cached with the application.							
Edit FormAssembly Configuration Save Cancel							
FormAssembly Configuration Information							
Location	FormAssembly						
FormAssembly Instance	app-test.tfaforms.net						
FormAssembly Plan	enterprise						
Has Account	yes						
Test Successful yes							
Username Field							
Username Matches FormAssembly	yes						
Wizard Position	5						

5. Refresh your Experience Cloud Page and your form should now show.

Method 2

If the Custom Setting does not resolve the error, go to **Salesforce** > **Setup** > **TRUSTED URLs**. If your FormAssembly instance URL is not configured as a trusted site, add it here.

In addition to your FormAssembly instance URL (Enterprise and Compliance Cloud users), we recommend adding the following sites to your list of TRUSTED URLs:

- http://www.tfaforms.com/
- https://www.tfaforms.com/

T	Trusted URLs									
Trustee	Trusted URLs									
Specify the U load from eac	Specify the URLs that you trust to interact with your users and network. You can use Content Security Policy (CSP) directives to control the types of resources that Lightning components, third-party APIs, and WebSocket connections can load from each trusted URL. If you enabled the Permissions-Policy HTTP header in Session Settings, you can control which URLs can access browser features from Salesforce.									
Related	Policies									
Content Sec from each tru	Content Security Policy (CSP). Use CSP directives to specify whether Lightning components, your CSP-secured <u>Aura or LWR sites</u> , third-party APIs, and WebSockets connections can load scripts, fonts, images, media, or stylesheets from each trusted URL. The main objective of CSP is to help prevent cross-site scripting (XSS) and other code injection attacks.									
Permissions	Permissions Policy. Control access to browser features such as cameras and microphones. To use this policy, enable the Permissions-Policy HTTP header under Browser Feature Permissions in Session Settings.

Method 3

If the form is still not displaying,

- 1. Navigate to Salesforce > Setup > Manage Users > Profiles.
- 2. Find the user profile you are using for your Experience Cloud User and click Edit
- 3. Using CTRL-F (or Command-F for MacOS), search for "API"
- 4. Confirm that the API Enabled setting is checked

Administrative Permis	sions

Note: The standard Experience Cloud User Profile provided by Salesforce does not have the API Enabled setting checked, so you will need to clone that profile and check the setting for users to access forms within the Experience Cloud Site.

Method 4

If you are still unable to see your form on the Experience Cloud Site, please contact our support team.

Prefilling with the Lightning Component

When a form is embedded in an Experience Cloud Site with the FormAssembly Lightning Component, it is possible to use standard prefilling methods to prefill Salesforce data into your form.

- 1. You can prefill through the Experience Cloud Site URL.
- 2. You can prefill your form using the Salesforce Prefill Connector.
- 3. If you have enabled Salesforce Experience Cloud Authentication, then you can prefill using session parameters.

Note: We recommend only embedding one form onto a single Experience Cloud Site page, particularly when prefilling.

When prefilling using methods 1 and 2, you'll need to add the prefill values to the URL of the Experience Cloud Site.

- For the following URL: https://FAdemo.na50.force.com/prefillingtest/s/
 - Method 1: If your form was embedded on your Experience Cloud Site at the URL above and you are prefilling through the URL, you would need to append "?field_alias=XXXXXX" to the end of the URL.
 - https://FAdemo.na50.force.com/prefillingtest/s/?field_alias=XXXXXX
 - Method 2: If your form was embedded on your Experience Cloud Site at the URL above and you are using the Salesforce Prefill Connector, you will need to append "?queryparameter=XXXXXX" to the end of that URL.
 - https://FAdemo.na50.force.com/prefillingtest/s/?queryparameter=XXXXXXX

Please refer to the help documentation for your chosen prefilling method before building your link.

Note: The page your form is embedded on within your Experience Cloud Site is not the same as your Portal Login URL. After logging into your Experience Cloud Site, you can access the page URL where your form is embedded.
