Overview

Google indexes all web pages on the Internet that do not specify a "noindex" meta tag. When Google visits your site, it detects new and updated pages and links, and can use this information to update the Google index, which is used for both Google Web Search and Custom Search.

Resolution

FormAssembly Essentials plan and above customers can insert the following meta tag in the <HEAD> for all of their forms using the [Advanced Site Branding Features](#).

Note: You must add the code below *before* publishing and sharing your form. If you add it later, it may take several months before Google removes it from the index.

Before publishing your form, please add the following code to the form <HEAD>:

```
<meta name="robots" content="noindex" />
```

<HEAD> HTML

Inherit default HTML <HEAD>. Uncheck this box to customize the <HEAD> element HTML.

```
<meta name="robots" content="noindex" />
```

Use this space to load custom css, javascript, or add your own meta tags. This space is **not** for adding content, text, or images to the page. Please enter valid HTML.
