Overview

Custom domains are able to be used on your FormAssembly forms in order to mask the domain portion of your form links. So instead of the following link:

[Your chosen instance name].tfaforms.net/123456

where 123456 is the form ID, your respondents could also fill out the form using a custom link such as this one:

forms.companyname.com/123456

If you would like to mask the form ID as well you can use our custom URL feature. You can find out more about custom URLs here.

Requirements

Custom domains are only available to Team plan customers and higher.

For information on adding a custom domain to your instance, please contact your Customer Success Manager or sales representative. If you need assistance with contacting your CSM, you can reach out to our Support Team as well by emailing support@formassembly.com or filling out this form.
