5.46 Highlights

We've been working behind the scenes to introduce two new connectors, now available as add-ons for Team and Enterprise plans: **Microsoft SharePoint** and **Google Drive**.

- Utilize the **Microsoft SharePoint** connector to seamlessly send file uploads directly to a OneDrive or SharePoint Site destination.

- Harness the **Google Drive** connector to effortlessly send file uploads directly to a personal or shared Google Drive directory.

Here's what's new:

1. **Enhanced Functionality**: We've bolstered our connectors to provide more robust capabilities. These enhancements ensure smoother integrations and pave the way for even more exciting features in the future.

2. **Multiple Forms Mapping**: Say goodbye to a one-size-fits-all approach! Now you can map multiple forms simultaneously with our connectors. Whether managing diverse projects or seeking greater flexibility, this feature simplifies the process with a single configuration step.

3. **Effortless Editing**: Easily undo or redo changes in your connector configuration. Whether adjusting step descriptions or mapping fields and values, rest assured that managing changes is just a click away.

4. **Customizable Field Selection**: Tailor your selections to suit your needs! Select specific fields from different forms, ensuring only essential data is transmitted. This flexibility streamlines your workflow and supports long-term form maintenance.

5. **User-Friendly Error Handling**: Customize error messages visible to respondents and manage workflow progression when issues arise, ensuring a smoother user experience.

6. **Improved Workflow Experience**: Enhancements to connector usability within Workflows make it simpler to find and configure the connectors you need directly from the Workflow panel, eliminating unnecessary pop-up windows.

and Microsoft SharePoint to your plan. Let's enhance your connections today!

5.46.1 Highlights

Our team has added additional layers of security to the FormAssembly platform in the form of Multi-factor Authentication and updates to password requirements and controls.

Here's what's new:

1. Multi-factor Authentication: Account admins on Essentials, Team, Enterprise and Government plans can now enable and enforce multi-factor authentication for users. Users can use the One Time Password (OTP) generator of their choice or use Yubikey authentication for secure log-in to their accounts.

2. Password Policy Update: Accounts have new minimum requirements enforced when users are setting new passwords. Admins can now configure the expiration date for user passwords to match their organization's security policy.
