Highlights

We're excited to introduce powerful new enhancements to Workflow-native Connectors and workflow variable management that offer greater flexibility and personalization in your workflows.

What's new:

- **Start Workflows with Connectors**:
  Workflow-native Connectors can now be placed in the **first position** of a workflow, enabling immediate execution as soon as the workflow is triggered.

- **URL Parameter Variables**:
  The new **Workflow Properties** panel now supports the creation of **URL Parameter variables**. These allow you to dynamically capture input directly from the workflow URL.

- **Dynamic Data Mapping**:
  URL Parameter variables can be mapped to Workflow-native Connectors, enabling seamless data flow from URL to workflow logic.

- **Salesforce Connector Prefill Support**:
  Users can now use URL Parameter variables in the **Salesforce Workflow Connector** to perform a **Lookup a Record** action. This enables **automatic pre-filling** of the first form in the workflow based on the lookup results.
