Changes & Bug Fixes

Salesforce Workflow Connector fixes:

- In the Salesforce Workflow Connector, form name will now be shown in the mapping dropdown instead of "undefined" if the form title is hidden
- Resolved an error in the Lookup a Record action of the Salesforce Workflow Connector when using a date field in a repeatable section
- Addressed an issue on the Salesforce Workflow Connector where actions with dependencies and preconditions would not run as expected when the initial action used "Continue with dependent actions"
- Addressed an issue in the Salesforce Workflow Connector where prefilling a Salesforce date value to a FormAssembly text field would produce an error

Fixes for all Workflow-native connectors:

- Addressed an issue in Workflow-native Connectors where reauthorizing a connector would create a duplicate saved authorization
- Resolved an issue on Workflow-native Connectors where actions were not marked as valid until clicking back into a newly created variable field

Misc. fixes:

- When a new validation type is selected on a form field, the previous validation configured on this field should be correctly cleared out
-
