# Changes & Bug Fixes

- For those using the Cybersource connector, FormAssembly is transitioning from Cybersource SOAP API to REST API.

- Signature or or Signer tags that don't meet formatting requirements of the E-Signature step will appear in mapping on the Document step.

- Addressed the following Salesforce Workflow Connector issues:

    - Deleted variables were sometimes still able to be mapped

    - Newly created variables were not displayed in the formula editor until page refresh

    - Variables created on other steps were unable to be mapped until page refresh
