- NEW FEATURES & ENHANCEMENTS

- Separate RAG DB for FormAssembly Classic vs FormAssembly Atlas experiences

With this update, separate RAG databases are being maintained to store knowledge information about FormAssembly Classic and FormAssembly Atlas experiences. This ensures Fai, FormAssembly's AI assistant, can connect to the relevant knowledge database and answer questions more accurately.

- FormAssembly Atlas admin communication improvements

Admins who recently converted from a FormAssembly Atlas trial to a paid plan will now see multiple areas of communication if an account has more active users than their purchased licenses allow, so they can take action to either purchase additional licenses or deactivate users. These include in-app banners and emails.

- PayPal production authentication testing

PayPal connector users can connect to production PayPal accounts to collect payments during the PayPal connector authentication process. Connected accounts show Production, not Sandbox.

- BUG FIXES

- Fixed an issue where the Dynamic Picklist modal did not return results when a test value contained punctuation

- Fixed an issue where some customers could build v2 workflows but would lose access to the workflow once they leave the workflow builder

- Fixed an issue where editing a Theme Name in the Form Builder within Workflow Builder would sometimes crash the app

- Fixed an issue that could surface an error log on Workflow resume

- Fixed an issue where sometimes connector errors could leave responses stuck on the workflow/processor page

- Fixed an issue where form respondents receiving an E-signature automatic email may see the form name instead of the form title
