Changes & Bug Fixes

- NEW FEATURES & ENHANCEMENTS

  - **SAML Authentication for Workflows**: This release sets up the FormAssembly backend so that in the near future respondents will be able to authenticate using SAML within a workflow.
    - **Flexible Configuration**: Workflow architects will be able to use multiple forms with different SAML configurations within the same workflow.
    - **Session Security**: Respondent sessions will remain separate, ensuring one respondent's session cannot be accessed by another.
    - **Authentication Mixing**: Architects will have the flexibility to mix SAML-authenticated forms with CAS-authenticated forms in a single workflow.

    Important Note:
    - Again, this release brings new authentication capabilities to the FormAssembly backend, but it is not available to end users immediately while existing SAML configurations for our customers are considered. Stay tuned for wider announcements about the availability of this feature.
