We're excited to announce FormAssembly version 5.170.0, featuring powerful new workflow management capabilities, enhanced spam protection options, and important bug fixes to improve your experience.

New Features & Enhancements

Workflow Status Management

Manage Workflow Lifecycle with Active and Archived States

You can now better organize and control your workflows with our new status management feature:

- **Change workflow status** between *Active* and *Archived* directly from the Workflow List page or within the Workflow Builder
- **View workflow status** at a glance on the Workflow List page to quickly identify which workflows are active
- **Archived workflows** automatically stop accepting new submissions and have their custom URLs removed
- **Publishing restrictions** prevent archived workflows from being accidentally published

This enhancement helps you manage your workflow allocation more effectively and maintain better control over your active forms.

Enhanced Spam Protection with Altcha

New Alternative to Google reCAPTCHA

We've added support for **Altcha**, a privacy-focused spam protection solution:

- Enable Altcha for both standalone forms and workflow forms
- Choose between Altcha or Google reCAPTCHA (both cannot be enabled simultaneously)
- Respondents must pass Altcha validation before submitting their responses

This gives you more flexibility in choosing the spam protection method that best fits your needs.

Simplified Permissions

Streamlined Access to Key Features

We've made several permissions more accessible:

- **Review before Submit** is now available to all users with *Content Management* package access
- **Spam Filters** are now available to all users with *Content Management* package access
- **Export Workflow Data** permission is now visible in *FormAssembly Atlas* environments, allowing admins to enable workflow response exports

Address Autocomplete Improvements

Better Support for Complex Addresses

We've enhanced our *Address Autocomplete* feature powered by Google Maps API:

- **Improved city mapping** for addresses in areas like Brooklyn, NY that use sublocality designations
- **Support for abbreviated addresses:** the feature now recognizes abbreviations like "N" for "North" in street names

Bug Fixes

Form Response Counter: Fixed an issue where the form response counter was not updating correctly when new responses were submitted or when responses were purged.

Payment Processing: Resolved a problem with the [Auth.Net](#) connector that was causing payment failures for credit cards with expiration dates in 2030.

File Uploads on Authenticated Forms: Fixed an issue where file uploads were being corrupted on CAS authenticated forms, ensuring files retain their original content.

Multi-Tenancy Export Issues: Corrected errors that were occurring when generating shared exports in multi-tenancy environments.

Important Notes

- All changes in this release are **backward compatible** between FormAssembly Atlas and FormAssembly Classic unless otherwise noted
 - No action is required from customers to benefit from these improvements
-
