LDAP Authentication in FormAssembly Workflows

This authentication option is now available on FormAssembly Classic setups

Forms configured with LDAP Authentication can now be used seamlessly within Workflow form steps. When a form with LDAP Authentication is added to a Workflow form step, LDAP Authentication is automatically enabled for that step — no additional configuration required.

How It Works

- Configure LDAP Authentication on your form as usual
- Add that form to a form step within your Workflow
- LDAP Authentication is automatically applied to the Workflow step
