New Features & Enhancements

New: Enhanced Workflow Management in Admin Dashboard

The admin dashboard now includes an “All Workflows” list. This view provides areas you can use to manage FormAssembly Workflows at scale. What’s new:

- Complete visibility – View all workflows with owner names, creation dates, and status at a glance
- Quick search – Find any workflow instantly by name or ID
- Instant actions – Archive, unarchive, or access workflow settings directly from the list

Identity Provider (IdP) Authentication Management

We’ve improved the IdP Authentication management experience:

- **Authentication List View:** Administrators can now view all shared authentications in a centralized table, making it easier to manage SAML configurations across your organization.
- **Direct Navigation:** Navigate directly from the authentication list to the SAML configuration page with a convenient link in each table row.
- **Security Indicators:** Security warning indicators now appear in the authentication table when a configuration is invalid, helping you quickly identify and address authentication issues.

Bug Fixes

Multi-Factor Authentication (MFA)

- **Fixed MFA Setup Issue:** Resolved an error that prevented users from completing MFA setup when using certain non-English languages. The MFA configuration page now loads correctly for all supported languages.

Form Response Handling

- **Finalize Button Fix:** Fixed an issue where clicking “Finalize” on a started form response was not properly triggering response completion or connectors. This particularly affected forms with save and resume enabled.

Dynamic Picklists

- **jQuery Conflict Resolution:** Resolved a jQuery conflict issue affecting forms with dynamic picklists. Dynamic picklists now work correctly even when embedded on pages that use their own jQuery libraries.

E-Signature & Document Generation

- **Special Character Support:** Fixed an issue where names containing special characters caused e-signature metadata and PDFs to be malformed.

Workflow Builder

- **Tooltip Display Fix:** Corrected a UI issue where the "Back to Workflow list" tooltip was appearing behind the workflow title when hovering over the collapsed navigation icon.

SAML Configuration

- **UI Defect Fixes:** Resolved several UI defects in the Advanced SAML configuration page, including navigation visibility and loading page styling issues.

Standalone Forms with Altcha

- **Publishing Method Fixes:** Fixed issues with Quick Publish, Copy and Paste, and REST API Embed methods when using standalone forms with Altcha enabled. All publishing options now function correctly with Altcha.

Important Notes

This release includes important security updates and performance improvements to keep your FormAssembly instance secure and running smoothly. All updates are backwards compatible across FormAssembly Classic and FormAssembly Atlas unless otherwise specified.

As always, if you have any questions or need assistance with any of these updates, please don't hesitate to contact our support team.
