## Salesforce Workflow Connector Improvements

**Map Salesforce checkbox values to FormAssembly fields** You can now specify which Salesforce checkbox values correspond to checked and unchecked states when mapping to FormAssembly fields. This brings the Salesforce Workflow Connector to parity with our legacy integration, giving you more control over how checkbox data flows into your forms.

**Handle null date values in Salesforce lookups** Salesforce lookup actions now gracefully handle null date values, eliminating errors when querying records with empty date fields.

## Collaboration & Permissions

**Improved collaboration settings access** Users with Manager-level access to shared forms can now view the Collaboration page without encountering permission errors, making it easier to manage team access.

**List forms with SAML configuration issues** You can now quickly identify forms that have SAML configuration errors requiring attention, helping you maintain secure authentication across your forms.

---

## Bug Fixes

**Fixed shared SAML configuration visibility** The "Shared Authentication Configuration" option now appears immediately after setting up shared SAML for the first time, eliminating the previous 24-hour delay.

**Fixed user group creation on Explorer plans** Resolved a page crash that occurred when creating user groups on Explorer plans, ensuring smooth permission management across all plan types.

**Improved email validation handling** Added support for the "blocked" status from ZeroBounce, ensuring proper handling of emails blocked through the ZeroBounce security interface.

---

## Additional Information

- All changes are backward compatible
  - No action required from users
-
