BUG FIXES

- Fixed an issue where the Save & Resume link was malformed for forms published via the REST API when originally accessed with URL prefill parameters, preventing users from resuming their form after logging in.
- Fixed a performance issue that caused significant lag when adding repeatable sections to forms that contained hidden calculated fields.
- Fixed an issue in the Form Builder where the sensitive data hint popup was obscuring the First-party / Third-party data classification options, making it impossible to select the correct setting.
- Fixed an issue with the Salesforce workflow connector where date fields were being prefilled with a 2-digit year and the date was off by one day when the locale was set to English US.
- Fixed an issue where embedded workflows using the Salesforce workflow connector without error handling rules would hang on the Submit button when a connector error occurred, instead of redirecting to an error page.

SECURITY

- Addressed security vulnerabilities to improve platform integrity.
-
