BUG FIXES

- Fixed an issue where embedding a workflow via the JavaScript embed feature would create a new workflow execution record on every page load, even before any user interaction. This reduces unnecessary data accumulation and keeps your execution history accurate.
- Fixed an edge case where CyberSource would return a confusing price-related error instead of properly handling invalid data passed to the tax endpoint.
- Fixed an issue where the Workflow Builder incorrectly displayed "Connector authorization is no longer available" due to a Salesforce access token being invalidated earlier than expected.
- Fixed a bug in Salesforce Workflow Connector where adding a new instance of a repeatable section in a prefilled workflow would incorrectly copy data from the first prefilled instance instead of starting blank.
- Fixed an issue where the SharePoint Connector failed or timed out when connecting to `/teams/` site URLs, preventing some users from completing their connector setup.
- Fixed a long-standing bug where selecting a tag to filter the forms list did not visually check the tag, making it impossible to tell which tags were active.
- Fixed an issue where the Save and Resume password error message was not translated correctly when the form language was set to a non-English language and the password strength was set to High.

SECURITY UPDATES

- Applied security patches
