### BUG FIXES

- Fixed an issue where two or more dynamic picklist fields inside a grid section would overlap and extend outside the section border.
- Fixed a privacy gap where download links for purged file upload responses remained accessible after the response data was deleted.
- Fixed an error that prevented Salesforce Workflow Connector lookups using the CONTAINS operator, which caused an invalid enum value error.
- Fixed an issue where form collaborators attempting to update the connection on a dynamic picklist field would get stuck on "Retrieving Connection Information..." indefinitely.
- Fixed an issue in the FormAssembly mobile app where offline form downloads would incorrectly fail with a "private theme" error even when the theme was public.
- Improved load time for workflows embedded via the JavaScript v2 embed in multi-tenant environments.
- Fixed a display bug where saving a form could cause translation catalog metadata to appear in the confirmation banner on the next page load.
- Fixed an issue in the classic response view where downloading any queued file after the first one would incorrectly serve the first file's content instead of the correct file.

### IMPROVEMENTS

- Workflow execution logs now correctly capture the `form_viewed` event when a form is submitted via the JavaScript v2 embed.

### SECURITY UPDATES

- Applied security patches
-
