NEW FEATURES & IMPROVEMENTS

- Document Generation now preserves existing field mappings when you update a template, as long as the tag names stay the same. No more re-mapping every field after a cosmetic edit.
- Improved Romanian language translations across form-facing text.

BUG FIXES

- Fixed an issue where users could lose access to connectors under certain account conditions.
- Fixed a database performance issue that could cause slower page loads for some customers during periods of high data-retention purge activity.

SECURITY UPDATES

- **Removed the ability of admin users to override other admin users.** This preserves audit trail integrity and ownership controls. We understand this may impact current admin workflows. If your admin users need to make changes to forms owned by other admins, they should use the [Form Collaboration](#) feature to share access.
