IMPROVEMENTS

- Improved how browsers cache the shared files (such as scripts and stylesheets) used by published forms, so forms can load faster on repeat visits.

BUG FIXES

- Fixed an intermittent issue where some workflow responses could get stuck "In Progress" after the form step, or time out on submission, instead of advancing to the next step.
 - Fixed an issue where clicking "View Logs" on a completed workflow response could return an "An unknown error occurred" message.
 - Fixed an issue where a workflow form submission that couldn't be processed right away (for example, showing "This link is temporarily unavailable") was blocked as a duplicate when it was sent again, ending the workflow before later steps ran. Resending the submission now processes as expected.
